

Business Question and Visualization Report

Date	25 aug 2026
Team ID	—
Project Name	India's Agricultural Crop Production Analysis Using Tableau
Maximum Marks	5 Marks

Visualization development refers to the process of creating graphical representations of data to facilitate understanding, analysis, and decision-making. The goal is to transform complex datasets into visual formats that are easy to interpret, enabling users to gain insights and make informed decisions. Visualization development involves selecting appropriate visual elements, designing layouts, and using interactive features to enhance the user experience. This process is commonly associated with data visualization tools and platforms, and it plays a crucial role in business intelligence, analytics, and reporting.

Business Questions and Visualisation

The process involves defining specific business questions to guide the creation of meaningful and actionable visualizations in Tableau. Well-framed questions help in identifying key metrics, selecting relevant data, and building visualisation that provide insights.

1. What is the trend of agricultural yield from 1997 to 2021?

Description:

This question helps identify how agricultural yield has changed over the years and highlights periods of growth or decline.

2. Which states have the highest agricultural production?

Description:

This helps identify the leading states in agricultural production and compare their overall performance.

3. How is agricultural production distributed across Indian states?

Description:

This question shows the regional distribution of agricultural production across India using a map.

4. Which crops occupy the largest cultivated area?

Description:

This helps compare cultivated areas of different crops and identify crops with higher cultivation coverage.

5. Which states have the largest cultivated area?

Description:

This question compares cultivated areas across states and identifies states with greater agricultural land utilization.

6. How does total agricultural production vary by year?

Description:

This helps understand yearly changes in total agricultural production between 1997 and 2021.

7. How is agricultural production distributed by unit type?

Description:

This shows the distribution of production according to different measurement or unit types in the dataset.

8. Which season contributes the most to agricultural production?

Description:

This helps compare production shares across seasons such as Kharif, Rabi and Autumn.

9. Which states and crops show better agricultural performance?

Description:

This question combines state and crop-level information to identify areas with stronger agricultural production and performance.
